authentec truesuite for windows 7 authentec truesuite download for windows 64bit authentec truesuite download windows 7 authentec truesuite software for windows 7 authentec truesuite fingerprint software for windows 7 windows 7 64 bit windows 7 driver windows 7 softwre windows 7 fingerprint software A: Actually, the number on the label is different, and it's only one copy of each machine, and there are no calibration data, you can only enroll the fingerprint. Even if you can access the machine's firmware to reset the TPM, it won't work since it's not a proper TPM. I suggest that you use fingerprint-gui to generate a certificate, then install it on your machine to use it with the fingerprint-authensoft to verify. 1. Field of the Invention This invention relates to an electrical connector, and particularly to a modular jack for connecting a telephone line to a peripheral device. 2. Description of Related Art As shown in FIG. 4, a conventional modular jack 70 is mounted on a printed circuit board 71 and a telephone line 74 is connected to the modular jack 70 by soldering. To prevent moisture from entering the connector and damaging electrical circuits within, the modular jack 70 is enclosed in a metal shell 72. However, the metallic shell 72 prevents heat dissipation from the electronic components within the connector. The heat is transferred to the printed circuit board 71 through the modular jack 70 and the telephone line 74, thereby affecting the performances of the electronic components within the connector and causing poor electrical connection. Furthermore, soldering is needed to connect the telephone line to the modular jack 70, thus a considerable amount of time is needed to manufacture the connector and its production cost is high. Hence, a modular jack with improved electrical connection is required to overcome the disadvantages of the prior art. In an effort to solve the problem, a connector is disclosed in U.S. Pat. No. 6,955,122. As shown in FIG. 5, the connector includes a housing 86 and a shell 84 enclosed within the housing 86. The shell 84 is made from a metal plate 82, and a flange 822 is provided at one end of the shell 84 to engage with the housing 86. A locking means 88 is attached to the shell 84 and includes a lug 830 having a rectangular hole 832 therein. The lug 830 is located at an end
