I have been reading a ton of stuff regarding complex analysis, and I get it: complex numbers are used as a replacement for real numbers to handle problems with quadratic and cubic functions, but why do we still use calculus? Why don't we just use complex analysis from the start, such as separating complex variables into real and imaginary parts? Why do we have to use calculus to derive theorems involving complex functions, when we could have simply used complex analysis from the start? I am asking this because I like calculus, and I am curious as to the reasoning behind using complex analysis. A: As you note, calculus is used to derive theorems about complex functions. Complex functions are being used for more and more interesting and important applications, particularly in physics and engineering. If we want to understand complex functions, we need to know the (covariant) derivative of a complex function, and that derivative involves calculus. That's why we use calculus. In the other direction, the process of calculus involves a series of questions, including the following: When does a limit exist? When is the derivative continuous? When is the derivative discontinuous? In other words, calculus and complex analysis are interdependent. There is a lot of applications that only makes sense in the context of complex analysis, even when one happens to just write equations involving complex numbers. Say, for example, you are designing a hydraulic valve, and you're given the function $f(z)=z^3\tanh(z)-\cos(z)-\frac{1}{2}$. That is, your job is to minimize the function $F(x)=\int_0^x f(z) dz$.

Beyond the Invisible: Evening for iPad, iPhone, Android, Mac and PC! Shadow stealers have arrived! Solve the mystery of the Shadows and free the city. Beyond the Invisible: Evening on iPad, iPhone, Android, Mac and PC is another game in the Shadow Games series that has received many positive reviews from our users. It is perfect for both connoisseurs of puzzles and those who prefer dynamic art and funny stories. In the game Beyond the Invisible: Evening you have to explore a huge city and its surroundings, explore its past and present, find out the secret of the city and its inhabitants. fffad4f19a
