The new edition adds new features to the original, such as new fractal art, computer generated natural landscapes, image resampling, and enhanced screensaver control. Fractals are a unique digital art form using mathematical formulas to create art with an infinite diversity of form, detail, color and light. In simple terms, a fractal is a graphical image that represents the behavior of a mathematical equation. The formula used determines how each pixel in an image is formed and colored. If you are not familiar with the notion, pixels represent the smallest display elements that make up the images you see on a computer monitor or television. A typical fractal image contains millions of these pixels. The KEYMACRO screensaver allows you to control the screensaver. This is done by creating macros (key sequences) to be run while the screensaver is active. Keymacro is the trademark of Keymacro Technologies, Inc. You can define up to 10 key sequences for this screensaver. When the screensaver is activated, you can choose to run one of the defined macros. The commands have to be defined in the form of a text file which is called a macro file. The macros are defined in the macro file by selecting the command for the key sequence and the key combination to be used.

Selecting a key combination to be used in the macro means the screensaver will display the next macro in the macro file when the corresponding key combination is pressed. The macro files can be stored in the user directory under the screensavers directory.
